

# Energy performance certificate (EPC)

25, Oak View Great Kingshill HIGH WYCOMBE HP15 6HB	Energy rating <b>E</b>	Valid until: <b>18 January 2026</b>
		Certificate number: <b>0742-2811-7299-9896-4695</b>

## Property type

Detached house

## Total floor area

141 square metres

## Rules on letting this property

Properties can be let if they have an energy rating from A to E.

You can read [guidance for landlords on the regulations and exemptions \(https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance\)](https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

## Energy efficiency rating for this property

This property's current energy rating is E. It has the potential to be B.

[See how to improve this property's energy performance.](#)

The graph shows this property’s current and potential energy rating.

Properties get a rating from A (best) to G (worst) and a score. The better the rating and score, the lower your energy bills are likely to be.

For properties in England and Wales:

- the average energy rating is D
- the average energy score is 60

### Breakdown of property’s energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says “assumed”, it means that the feature could not be inspected and an assumption has been made based on the property’s age and type.

Feature	Description	Rating
Wall	Cavity wall, as built, no insulation (assumed)	Poor
Wall	Cavity wall, as built, insulated (assumed)	Good
Roof	Pitched, 100 mm loft insulation	Average

Feature	Description	Rating
Roof	Pitched, insulated (assumed)	Good
Window	Fully double glazed	Average
Main heating	Boiler and radiators, mains gas	Average
Main heating control	Programmer, room thermostat and TRVs	Good
Hot water	From main system, no cylinder thermostat	Very poor
Lighting	Low energy lighting in 50% of fixed outlets	Good
Floor	Suspended, no insulation (assumed)	N/A
Floor	Solid, insulated (assumed)	N/A
Secondary heating	None	N/A

## Primary energy use

The primary energy use for this property per year is 421 kilowatt hours per square metre (kWh/m<sup>2</sup>).

► [What is primary energy use?](#)

## Environmental impact of this property

This property's current environmental impact rating is F. It has the potential to be C.

Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO<sub>2</sub>) they produce each year. CO<sub>2</sub> harms the environment.

## An average household produces

6 tonnes of CO<sub>2</sub>

## This property produces

10.0 tonnes of CO<sub>2</sub>

## This property's potential production

3.0 tonnes of CO<sub>2</sub>

You could improve this property's CO<sub>2</sub> emissions by making the suggested changes. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

**Improve this property's energy rating**

▶ [Do I need to follow these steps in order?](#)

---

**Step 1: Increase loft insulation to 270 mm****Typical installation cost**

£100 - £350

**Typical yearly saving**

£59

**Potential rating after completing step 1****41 | E**

---

**Step 2: Cavity wall insulation****Typical installation cost**

£500 - £1,500

**Typical yearly saving**

£440

**Potential rating after completing steps 1 and 2****52 | E**

---

**Step 3: Floor insulation (suspended floor)****Typical installation cost**

£800 - £1,200

**Typical yearly saving**

£81

**Potential rating after completing steps 1 to 3****54 | E**

## Step 4: Low energy lighting

Typical installation cost

£40

Typical yearly saving

£28

Potential rating after completing steps 1 to 4

55 | D

## Step 5: Hot water cylinder thermostat

Typical installation cost

£200 - £400

Typical yearly saving

£155

Potential rating after completing steps 1 to 5

59 | D

## Step 6: Replace boiler with new condensing boiler

Typical installation cost

£2,200 - £3,000

Typical yearly saving

£474

Potential rating after completing steps 1 to 6

72 | C

## Step 7: Solar water heating

Typical installation cost

£4,000 - £6,000

## Typical yearly saving

£46

## Potential rating after completing steps 1 to 7

74 | C

## Step 8: Solar photovoltaic panels, 2.5 kWp

### Typical installation cost

£5,000 - £8,000

### Typical yearly saving

£276

## Potential rating after completing steps 1 to 8

81 | B

## Paying for energy improvements

You might be able to get a grant from the [Boiler Upgrade Scheme \(https://www.gov.uk/apply-boiler-upgrade-scheme\)](https://www.gov.uk/apply-boiler-upgrade-scheme). This will help you buy a more efficient, low carbon heating system for this property.

### Estimated energy use and potential savings

Based on average energy costs when this EPC was created:

### Estimated yearly energy cost for this property

£2201

### Potential saving if you complete every step in order

£1282

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

## Heating use in this property

Heating a property usually makes up the majority of energy costs.

### Estimated energy used to heat this property

Type of heating	Estimated energy used
-----------------	-----------------------

**Type of heating** **Estimated energy used****Space heating** 19873 kWh per year**Water heating** 3475 kWh per year**Potential energy savings by installing insulation****Type of insulation** **Amount of energy saved****Loft insulation** 706 kWh per year**Cavity wall insulation** 5304 kWh per year**Saving energy in this property**[Find ways to save energy in your home.](#)**Contacting the assessor and accreditation scheme**

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
